Dear Sir or Madam,

As in previous years, we shall also ensure reliable and smooth collection and utilisation of your product residues at K 2019.

We have set up 5 collection points with various large containers on the site. Employees of our recycler accept your products here and assign them to the appropriate large containers. This provides us with a high degree of sorting accuracy

These products are then recycled by our recycler according to the optimum recycling method:

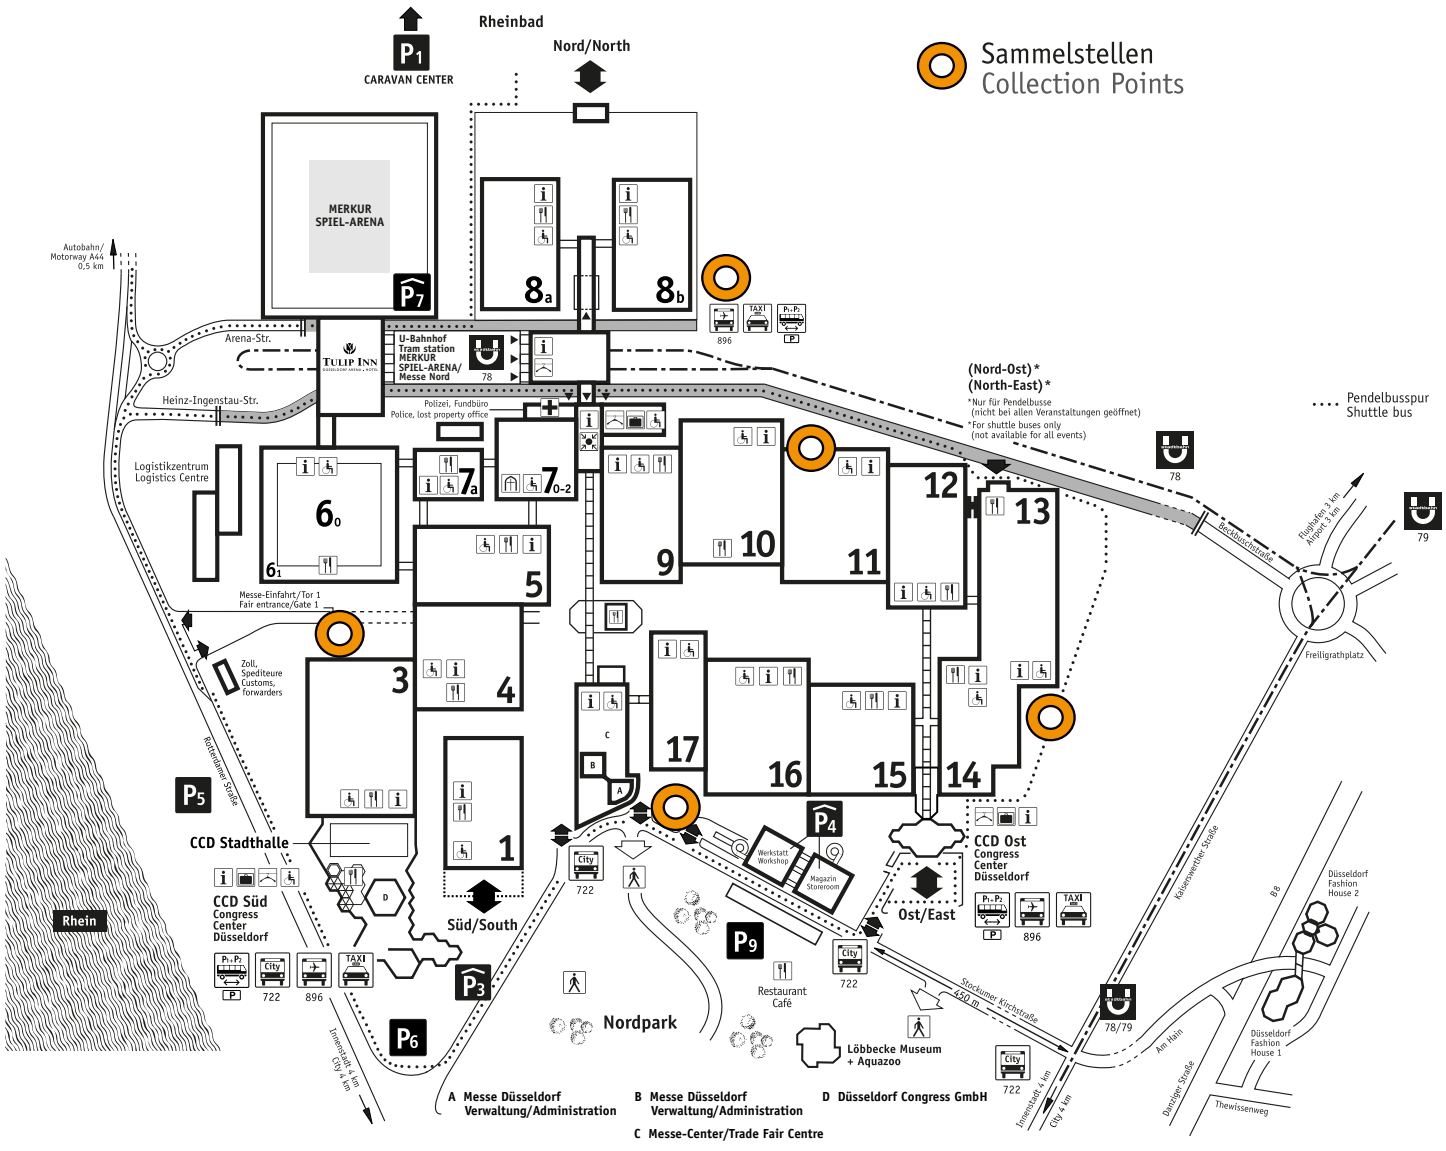
- Material recycling (regranulation, recycling)
- Processing (material recycling, thermal utilisation)
- Thermal utilisation

You will receive our disposal reports with material and quantity information about your delivered materials.

Please organise the delivery yourself or commission our forwarding agents to transport the goods from your stand to our collection point.

It is important for our collection and utilisation logistics to know your approx. production volumes as well as the nature and form of your materials in advance.

Thank you for your cooperation.

With best regards,


Messe Düsseldorf GmbH
